How each Section of a Brio Report interrelates. Financial Data Warehouse (FDW) contains all of APHIS's financial **QUERY Section**information. It is read only. retrieves the data from the Financial Data warehouse. It is the mechanism that asks for the data. Financial data is brought into Results Section based on what was requested in the Query Section. **RESULTS Section** is the financial data located on your C:drive. Sorts and Limits can be created in this section. Any Limit placed in this section affects all other sections in a Report. REPORT Section -TABLES Section - Similar to results, TABLES Section - You can create CHART Section - creates Printable but not flexible or can be limited and exported. Limits PIVOTS Section- can't multiple tables with different Limits; charts that can be printed easy to create. placed here only affect sections created Limits placed here only affect sections limit but creates quick created off the Table Section. off the Table Section. printable reports that can be exported. PIVOTS Section-You can Pivot the chart. The pivot can then be CHART Section - you can printed out or Chart the Pivot. This chart exported. PIVOTS Section- a can be printed out. pivot based on a Table REPORT Section -PIVOTS Section- a will only show data NOT Printable but not flexible or CHART Section - creates pivot based on a Table removed by a Limit charts that can be printed easy to create. will only show data NOT
